Contents

Session 1 : Cross-Disciplinary Physics

1. Dielectric abnormal relaxation in condensed matter
S. Mashimo (invited speaker) (Tokai University)
2. Synchronization and chaos in the discrete chemical oscillation system
K. Miyakawa, T. Okabe, M. Mizoguchi, F. Sakamoto (Fukuoka University)
3. Thermal unfolding of a ferri-cytochrome C
H. Sakashita, Y. Miura (Kyushu University)
4. Stochastic resonance in electrical circuit
H. Yamazaki, A. Miyagawa (Fukuoka Institute of Technology),
O. Inomoto, S. Kai (Kyushu University)
5. Natures on the fluctuations of the intensity of microwave from twenty eight quasars
N. Tanizuka, M. Takano (University of Osaka Prefecture)
6. Pre-melting mode in the disordered KNO_3 crystal observed by the low-frequency raman scattering
M. Sanada (Kyushu Kyoritsu University), *T. Yagi* (Hokkaido University)
7. Fractality of the exploratory behavior in cockroaches (*Periplaneta Fuliginosa* and *Periplaneta Americana*)
T. Nagamine, S. Miyazima, S. Maekawa (Chubu University)
8. Temperature dependent diffusion constant and mobility of positive ion in bulk liquid helium near absolute zero temperatures
C. I. Um (invited speaker) (Korea University), *C. W. Jun* (Kyung Nam University),
K. H. Yeon (Chungbuk National University)
9. Time-convolutionless reduced-density-operator theory of highly excited semiconductors
D. Ahn (invited speaker) (LG Electronics Research Center)
10. Study of Mott-Hubbard transition in the half-filled Hubbard model in large dimensions
J. Hong (invited speaker), H. Y. Kee (Seoul National University)
11. Heat capacity and magnetization of quantum dots in high magnetic fields
S. J. Lee (invited speaker) (Korea Military Academy),
G. Ihm (Chungnam National University),
J. H. Oh, K. J. Chang (Korea Advanced Institute of Science and Technology)

12. Nonlinear response theory by using the unique Floquet decomposition theory
T. Shimizu (Kokushikan University),
G. Sauermann (Technische Hochschule Darmstadt)
13. Stochastic dynamics and replica symmetry breaking of neurosystems
Y. Yamazaki (Kyushu Institute of Technology), *S. J. Kim* (National Fisheries University of Pusan), *M. Ochiai* (North-shore College)
14. Chaos dynamical analysis of EEG data
Y. Nagai (Kokushikan University), *M. Kohiyama*, *A. Tomita*, *T. Ogihara* (Azabu University)
15. Brownian motion of an electric dipole
K. Seki (National Institute of Materials and Chemical Research)
16. Diffusion constant of proteins in biomembranes
S. Komura (Kyushu Institute of Technology), *K. Seki*, *K. Miyazaki* (National Institute of Materials and Chemical Research)
17. Response property of complex system interpreted by information geometry
N. Ikeda, *H. Hara* (Tohoku University), *T. Obata* (Gunma National Technical College)
18. Nonlinear mapping describing learning process having memory
S. S. Lee, *H. Hara* (Tohoku University), *T. Yosiyasu* (Institute of Statistical Mathematics)
19. Application of quantal hypernetted-chain approximation to hot dense plasmas
H. Furukawa (Institute for Laser Technology)
20. Symmetry properties of Matsubara Green's functions
T. Toyoda (*invited speaker*) (Tokai University)
21. Collective mechanism for attraction of charged particulates in plasmas with finite flows
S. V. Vladimirov, *M. Nambu* (Kyushu University)
22. Universal scaling functions for percolation on planar lattices
C. K. Hu (*invited speaker*) (Academia Sinica), *C. Y. Lin* (National Tsing Hua University), *J. A. Chen* (Academia Sinica)
23. Critical exponents of saw at the 0 point in two dimensions
T. Ishinabe (Yamagata University)
24. Commensurate-locking of the orbitals of the Saturnian ring particles in the commensurability with a Saturnian satellite
H. Mitani, *D. Ohtsubo*, *Y. Eshita* (Fukuoka University of Education)
25. On a universality of random knotting
T. Deguchi (Ochanomizu University), *K. Tsurusaki* (University of Tokyo)

26. Recombination instability induced current oscillations in semiconductors
K. Oshio, H. Yahata (Hiroshima University)
27. Histogram-importance-sampling Monte Carlo approach to the q-state potts model
J. A. Chen, C. K. Hu (Academia Sinica)
28. Histogram Monte Carlo approach to site percolation on three-dimensional lattices
C. Y. Lin (National Tsing Hua University), *C. K. Hu* (Academia Sinica)
29. Roton-limited mobility of positive ions in bulk liquid ^4He
S. J. Lee (Korea Military Academy), *M. Tokuyama* (Tohwa University),
C. W. Jun (Kyung Nam University), *C. I. Um, J. R. Kahng* (Korea University)

Session II: Chaos

30. Dynamical behaviors of Coulomb crystals and liquids in strongly coupled dusty plasmas
L. I (invited speaker), W. T. Juan, C. H. Chiang (National Central University)
31. Viscous boundary layer measurements in Rayleigh-Benard convection
K. Q. Xia (invited speaker) (Chinese University of Hong Kong)
32. Causality and response theory
D. J. Evans (invited speaker), D. J. Searles (Australian National University)
33. Quantum chaos: Some recent problems
K. Nakamura (invited speaker) (Osaka City University)
34. A topological characterization of strange attractors
H. Yamazaki (University of Tsukuba), *T. Motoike* (North-Shore College),
T. Arimitsu (University of Tsukuba)
35. Statistical mechanics of a generalized Calogero-Sutherland system
J. Z. Ma, H. Hasegawa (Fukui University), *K. Nakamura* (Osaka City University)
36. Large deviation statistical mechanics
H. Fujisaka (Kyushu University)
37. Stability and stochasticity of quantum chaos
N. Suda (Nippon Medical School)
38. A study of chaos synergetic neural network
M. Nakagawa (Nagaoka University of Technology)
39. Relaxation process in a nonlinear system with chaotic force
N. Morioka (Kokushikan University)

- 40. Dynamical delocalization in a coherently time-varying one-dimensional disordered system
H. Yamada (Niigata University)
- 41. Global scaling laws in 2D open billiards
S. Koga (Osaka Kyoiku University)
- 42. Bifurcations of periodic orbits in the Hamiltonian system with threefold symmetry
S. Kurosaki (Waseda University)
- 43. N-body Lyapunov exponent in strongly coupled plasmas
Y. Ueshima, K. Nishihara, H. Furukawa (Osaka University)

Session III: Complex Fluids

- 44. Viscoelastic behavior of ultra-fine particle suspensions
T. Shikata (invited speaker), H. Niwa (Osaka University),
T. Kotaka (Toyota Technological Institute)
- 45. Nucleation in dense fluids of hard spherical colloids
J. L. Harland, S. M. Underwood, W. Van Megen (invited speaker)
(Royal Melbourne Institute of Technology)
- 46. Ordering process of block copolymers near order-disorder transition
N. Sakamoto, T. Hashimoto (invited speaker) (Kyoto University)
- 47. Viscoelastic phase separation in dynamically asymmetric fluid mixtures
H. Tanaka (invited speaker) (University of Tokyo)
- 48. Effects of polystyrene adsorption on structure and rheology of silica suspensions
A. Mizutani, M. Kawaguchi, T. Kato (Mie University)
- 49. Heterogeneous structure and irreversible enthalpy relaxation in liquid dibutylphthalate
M. Mizukami, H. Fujimori, M. Oguni (Tokyo Institute of Technology)
- 50. Broadband light scattering and anomalous relaxations of supercooled propylene glycol
S. Kojima (University of Tsukuba), *H. Sato, A. Yosihara* (Tohoku University)
- 51. Scaling function of diffusion coefficient of probe molecules in gel
M. Tokita (Mie University)
- 52. Electrohydrodynamic convection in planar and homeotropic systems of nematic liquid crystals
K. Hayashi, Y. Hidaka, S. Kai (Kyushu University)

53. Molecular weight dependence of equilibrium melting temperature and crystallization process of low molecular weight poly (ethylene oxide) (PEO) in PEO/poly (methyl methacrylate) (PMMA) blends
S. Imai, K. Iida, M. Okada, M. Takahashi, H. Matsuda (Shinshu University)
54. Molecular weight dependence of lateral growth rate of a single crystal of polyethylene
M. Okada (Shinshu University), *M. Nishi* (Hiroshima University), *A. Fujita, M. Takahashi* (Shinshu University), *M. Hikosaka* (Hiroshima University), *H. Matuda* (Shinshu University)
55. Synchrotron small angle X-ray scattering of slow spinodal decomposition in a block copolymer
M. Takenaka, K. Linliu, Q. Ying, B. Chu (State University of New York at Stony Brook), *D. Peiffer* (Exxon Research & Engineering Co.)
56. Slow dynamics of nonequilibrium density fluctuations in concentrated colloidal suspensions
M. Tokuyama (*invited speaker*) (Tohwa University)
57. A unified theory for the glass transition singularities
T. Odagaki (*invited speaker*) (Kyushu University)
58. Two barrier crossing problems in biomembranes: Polymer translocation and pore growth
W. Sung (*invited speaker*), *P. J. Park* (Pohang University of Science & Technology)
59. Dynamics of volume transition of gels
M. Doi (*invited speaker*), *T. Tomari* (Nagoya University)
60. Morphology of phase separating copolymer mixtures
T. Ohta (*invited speaker*) (Ochanomizu University)
61. Domain growth and rheology in phase-separating fluids
A. Onuki (*invited speaker*) (Kyoto University)
62. Exactly solved lattice models and the statistical physics of polymer chains
M. T. Batchelor (*invited speaker*) (Australian National University)
63. Dynamics of supercooled binary liquids
Y. Kaneko (Kyoto University), *J. Bosse* (Freie Universität Berlin)
64. Inhomogeneous gels crosslinked within spinodal region
H. Nakazawa (Nagoya University), *K. Sekimoto* (Kyoto University)
65. A theory on the bending moduli of thin membranes by the use of a simple molecular model
Y. Suezaki, H. Ichinose (Saga Medical School)
66. Brownian motion of a sphere in slow shear flow
K. Miyazaki (National Institute of Materials & Chemical Research)

- 67. Phase transitions in chiral smectic liquid crystals
T. Koda (Yamagata University), H. Kimura (Fukui University of Technology)
- 68. On surface ordering in solutions of rigid rodlike molecules
A. Matsuyama, T. Katoh (Mie University)
- 69. Local connectivity approach to microemulsions: Proof of a bicontinuous phase in a lattice model
Y. Ueno (Tokyo Institute of Technology)
- 70. The shear induced disordering transition in a colloidal crystal
S. Butler, P. Harrowell (*invited speaker*) (University of Sydney)
- 71. Structural transformations of ice at high pressures via molecular dynamics simulations
T. Hashimoto, S. Sugawara, Y. Hiwatari (*invited speaker*) (Kanazawa University)
- 72. Variation of liquid temperature near a sonoluminescing bubble
K. Yasui (Waseda University)
- 73. Nonequilibrium structural changes of a viscoelastic liquid under oscillatory shear
H. Komatsugawa, S. Nosé (Keio University)
- 74. Avalanche phenomena in two-dimensional foam systems
T. Okuzono (Ochanomizu University), K. Kawasaki (Chubu University)
- 75. Numerical simulations of hydrodynamically interacting granular particles
K. Ichiki, H. Hayakawa (Tohoku University)
- 76. The time development and temperature effects on highly correlated motions of atoms in supercooled fluids
T. Muranaka (Aichi Institute of Technology), Y. Hiwatari (Kanazawa University)

Session IV: Structures & Patterns

- 77. Phase separation under a concentration gradient
C. K. Chan (*invited speaker*) (Academia Sinica)
- 78. Phase separation of polymer solutions in the metastable region
K. Kubota (*invited speaker*) (Gunma University)
- 79. Experimental and simulational approach to discrete and continuum percolation problems
S. Miyazima (*invited speaker*), K. Maruyama, K. Okumura, A. Okazaki, Y. Hasegawa (Chubu University)
- 80. Transition of crack patterns in quasi-static fracture
A. Yuse, M. Sano (Tohoku University)

81. Morphological crossover for viscous fingering patterns in polymer solutions
K. Makino, M. Kawaguchi, T. Kato (Mie University)
82. Hydrochemical soliton: Experimental study of a chemical wave coupled with Marangoni instability in Belousov-Zhabotinsky reaction
O. Inomoto (Kyushu University), *T. Ariyoshi, S. Inanaga* (Kyushu Institute of Technology), *S. Kai* (Kyushu University)
83. Statistical analysis on self-affine fractal interface of polycrystalline NH_4Cl film
T. Kaneko (Tohoku University), *H. Honjo* (Kyushu University)
84. Temporal evolution of the amplitude and the phase in the formation process of the Williams domain
Y. Miyazaki (Nagoya University), *Y. Hidaka* (Kyushu University), *T. Nagaya, H. Orihara, Y. Ishibashi* (Nagoya University)
85. Universal and individual dynamics of pattern selection in extended systems
M. I. Tribelsky (*invited speaker*) (KAO Co.), *K. Hayashi, Y. Hidaka, S. Kai* (Kyushu University)
86. Rotational states of coupled spherical molecules
Y. Ozaki (Nagoya Institute of Technology)
87. On the time-dependent deformation of a droplet under shear flow
T. Imaeda (Tohwa University)
88. Evolution of off-phase variants in the $L1_2$ type ordering
R. Oguma (Fukuoka University), *T. Eguchi* (KRG Research Institute)
89. Growth kinetics of field-induced inversion domains in smectic-C films
B. Kim (*invited speaker*) (Changwon National University),
S. J. Lee (University of Suwon), *J. R. Lee* (Pusan National University)
90. Phase transitions in two-species asymmetric diffusive lattice gases
K. T. Leung (*invited speaker*) (Academia Sinica)
91. Self-organization in a two-dimensional cellular automaton model of traffic flow
S. Tadaki (Saga University)
92. Waves and patterns in a media which has both of the excitable and oscillatory characters
R. Kobayshi (Hokkaido University), *T. Ohta, Y. Hayase* (Ochanomizu University)
93. Nucleation of water-soluble Whisker crystals
K. Kishi, T. Yoshida, K. Yoshioka, H. Yumoto (Science University of Tokyo),
T. Shichiri (Osaka City University)

94. Scaling behavior in evolving cellular structures with anisotropy
T. Nagai (Kyushu Kyoritsu University)
95. Formation and dynamics of boojums in the thin layers of nematics with hybrid boundary conditions
H. Toyoki (Yamanashi University)
96. Formation process of spiral patterns in an oscillatory media
D. Ueyama, R. Kobayashi (Hokkaido University), *T. Ohta* (Ochanomizu University)
97. Ordering process and Bloch wall dynamics in nearly 1D anisotropic spin system
H. Tutu, H. Fujisaka (Kyushu University)
98. Pattern formations in reaction-diffusion system
K. Ouchi (Kobe Design University), *H. Fujisaka* (Kyushu University)
99. Turing instability in the Oregonator model
T. Fujimoto, H. Fujisaka (Kyushu University)
100. A fast computation in symmetric traveling salesman problems
S. Mayama (Tokai University)
101. Spatio-temporal behaviors of convection in quasi-one-dimensional systems
A. Ogawa, T. Kimura, Y. Harada (Fukui University)
102. Computer simulation study of encounter effects on phase separations
Y. Enomoto (Nagoya Institute of Technology), *M. Tokuyama* (Tohwa University)
103. The dependent fluctuation of polished surface
Y. Hasegawa, S. Miyazima (Chubu University)
